Smart Home – Smart Garden?

Smart homes have become a familiar part of modern living—but what about smart gardens? More and more, outdoor spaces are being used as true extensions of the home. To enjoy features like smart lighting, automated irrigation, outdoor entertainment, or security systems, a reliable and safe power supply is essential.

Until now, there has been no standard for professionally routing power from the house to the garden. ETGAR is changing that—bringing power to where it is needed, and making the smart garden a reality.

Charging station

Multi-line building entries

ETGAR Building package

Advantages

Plan ahead - connect endlessly

By planning the placement of the building services outlet early, you will have the freedom to design your garden without restrictions. All options are open to you.

We are setting a new standard

Currently, no standardized method exists for reliably routing power cables out of a building and across the property.

Ready for what's yet to come

From sandbox to outdoor cinema to whirlpool—ETGAR's building services outlet keeps your garden ready for the future.

Bring electricity flexibly to your garden

The polymer concrete base plate is weather-resistant, works like regular concrete, supports tensile loads up to 100 kg, and allows easy attachment of your devices with screws.

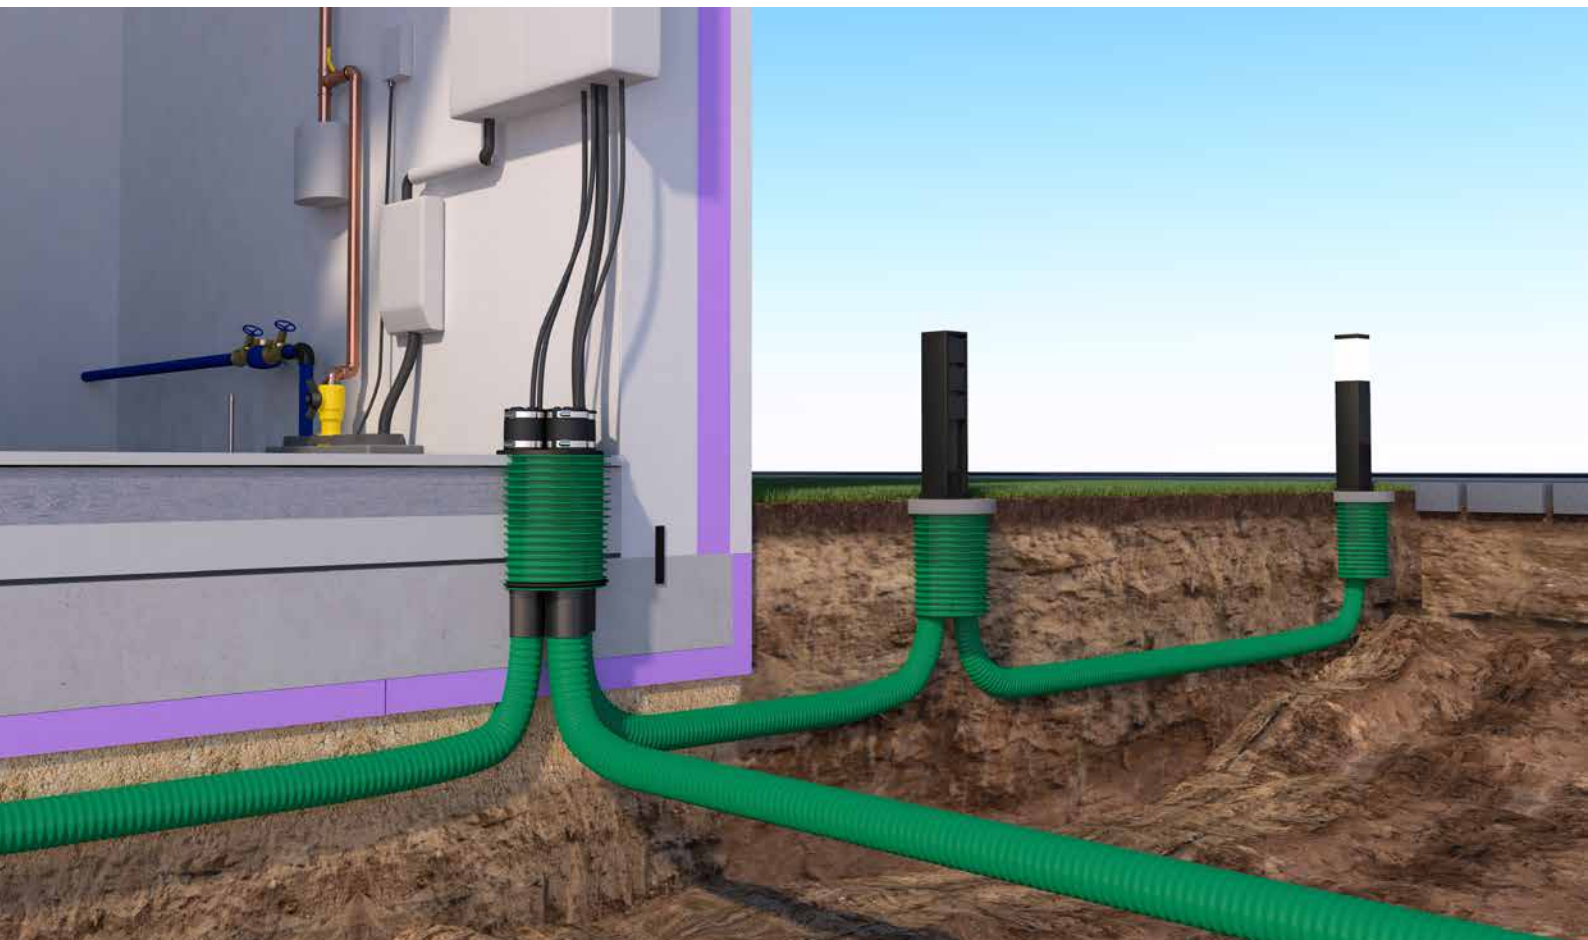

Protect your building exterior

The building services outlet eliminates the need to drill holes in the floor slab or basement wall, which can damage the building's exterior.

Ready-to-connect system

The ETGAR foundation box offers the option of quick and uncomplicated installation and mounting of electrical end devices.

**Install ETGAR when you build your house
and have the flexibility to design your garden later!**

Connection possibilities

ETGAR foundation box

Lighting

From bollard lights along the path to driveway spotlights and garden ambient lighting—light is a key design element that enhances not just the interior, but the exterior too.

Pool/pond pump

A pool or pond adds atmosphere and refreshment to your property. With ETGAR, powering the water pump is simple and efficient.

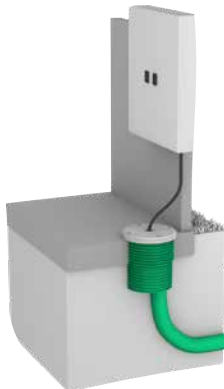

Socket strip

Whether it is a garden party with fairy lights and an electric grill, an outdoor movie night, or festive Christmas lights—they all require power. A socket strip offers ample connections.

Charging station for robotic lawnmowers

Robotic lawnmowers are now as common in gardens as vacuum cleaners are in homes. ETGAR provides the perfect base for their charging station.

Garage/garden house/garden sauna

Whether it is a garage without power, a garden shed, or a private outdoor sauna, a foundation box makes it easy to run electricity to an intermediate distributor—solving your power needs effortlessly.

Security systems

Safety first! But how can you monitor large areas without mounting cameras directly on the house? With the flexible, expandable conduit system, you can easily cover the entire property.

Numerous other end devices

The connection possibilities are endless. ETGAR is the ideal solution for creating the garden you want in the future.

ULF – The base for your electromobility

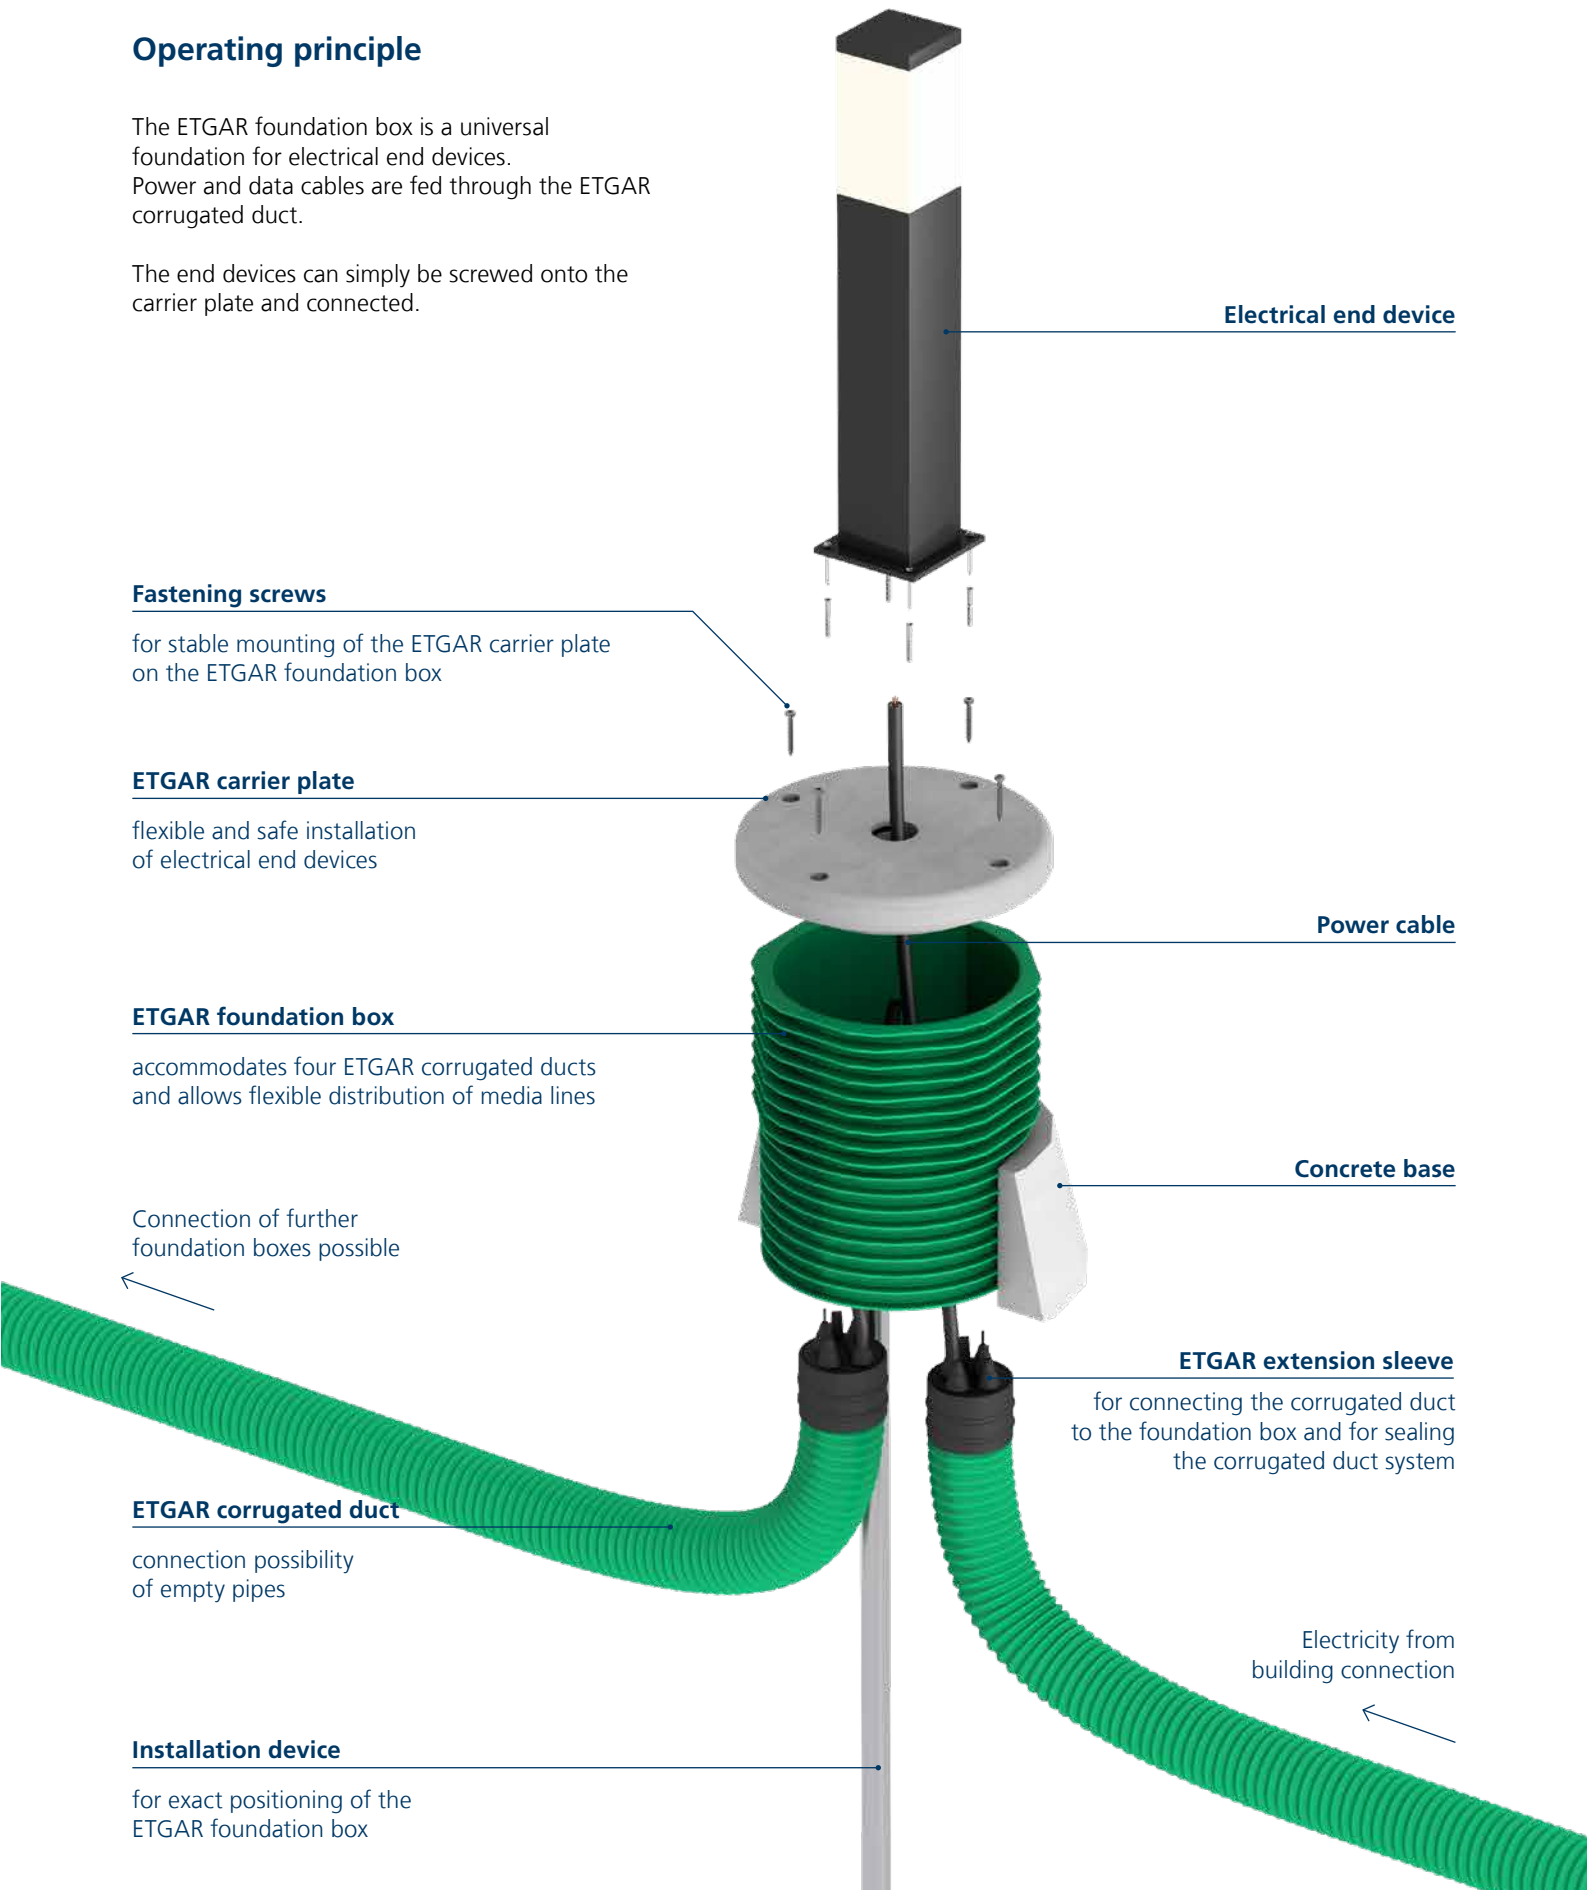

ETGAR also supplies power to your charging station and pairs seamlessly with the ULF universal charging station foundation.

Device connection

Operating principle

The ETGAR foundation box is a universal foundation for electrical end devices. Power and data cables are fed through the ETGAR corrugated duct.

The end devices can simply be screwed onto the carrier plate and connected.

Electrical end device

Fastening screws

for stable mounting of the ETGAR carrier plate on the ETGAR foundation box

ETGAR carrier plate

flexible and safe installation of electrical end devices

Power cable

ETGAR foundation box

accommodates four ETGAR corrugated ducts and allows flexible distribution of media lines

Concrete base

Connection of further foundation boxes possible

ETGAR extension sleeve

for connecting the corrugated duct to the foundation box and for sealing the corrugated duct system

ETGAR corrugated duct

connection possibility of empty pipes

Electricity from building connection

Installation device

for exact positioning of the ETGAR foundation box
