

The base for your electromobility

ULF – Universal charging station foundation

Legal requirements

EU directive on electric mobility infrastructure in buildings

At new and renovated residential buildings with more than ten parking spaces, each parking space must be equipped to facilitate the charging infrastructure for electromobility.

At non-residential buildings with more than 20 parking spaces, a number of parking spaces determined by the respective country must be equipped with charging points for electromobility.

The line infrastructure includes the entirety of all cable routing to accommodate electrical and data cables, i.e. cable routes in the form of empty conduits, cable ducts, cable trays, etc. must be installed.

The basis for this is Directive (EU) 2018/844 of the European Parliament. In addition, each country is free to introduce more stringent requirements than the ones contained in the directive.

Our solutions

We offer various solutions for setting up a charging infrastructure that meets your needs.

While our ULF foundation solution is speeding up expansion in public and semi-public areas, our comprehensive ETGAR system makes it possible to supply outdoor areas with electricity.

Our solutions for buildings without basement

Our solutions for buildings with basement

ETGAR

Building services outlet

-  HAB ETGAR BHP
-  HAW-M ETGAR BHP

1

2

The ETGAR building services outlet routes the electrical cables from the connection room to all the facilities on the property and the associated parking spaces that are subsequently to be supplied with electricity. The building services outlets meets all building sealing requirements – such as gas and water tightness as well as radon protection.

Ready for electromobility!

Benefits of our solution

- complete system for distributing electric power supply to the properties entire grounds from the building connection room
- retrofitting the empty conduit system is possible at any time without digging
- can be individually expanded, combined and extended thanks to the modular structure

ULF

Connection point

ULF **3**

The universal charging station foundation is suitable for quickly and easily setting up a charging infrastructure at parking spaces. Its low weight makes installation and assembly particularly easy. It can be combined and expanded with the ETGAR system or other empty pipe solutions.

ULF

Preparation connection point

ULF **4**

Even while planning the building and its parking spaces, the universal charging station foundation can be installed ready for connection. This means that subsequent civil engineering work can be avoided and the installation of a charging station can be carried out at any time without complications.

Commercial and public spaces

Intelligent charging infrastructure for powering vehicles in the commercial and public spaces:

Commercial space

- companies
- hotels
- gastronomy
- housing industry

Public space

- cities
- municipalities
- public institutions

Integrated charging infrastructure

Companies, service providers, hotels and other semi-public facilities will demonstrate a greater need for charging stations in the future.

For the predicted upturn in electromobility, the corresponding charging infrastructure will be expanded. Moreover, the European government supports the Europe-wide expansion of the charging infrastructure through Directive (EU) 2018/844. Here, the individual member states are asked to define

country-specific regulations for the minimum number of charging points.

With the universal charging station foundation (short ULF), Hauff-Technik has created an innovative and universal foundation for charging stations.

ULF offers a foundation solution for various types of charging stations, charging columns and for a variety of installation situations.

Universal charging station foundation

Functional principle

ULF is a universal foundation for charging stations and charging columns. Power and data cables are introduced via a conduit connection.

The charging station or pedestal is attached and connected to the foundation plate.

mounting options

screwing or dowelling possible on site

foundation slab

flexible and safe installation of charging stations

foundation pipe

allows alignment of the foundation and a flexible arrangement of the media lines

empty conduit

connection option for empty conduits

concrete foundation

attachment of the ULF

charging station

data cable

power cable

connection of further ULFs possible

electricity from the house connection/transformer station

Foundation comparison

Precast foundation

ULF

Foundation concreted on-site

Features

Weight	100 kg – 900 kg	< 40 kg	–
Chemical resistance	depending on the concrete quality	acid and alkali resistance	depending on the concrete quality
Surface	smooth and even	very smooth and even	depending on the processor
Frost and de-icing salt resistance	only with special concrete	resistant through polymer concrete (FX4)	only with special concrete
Height adjustment	–	can be cut to length on site	–
Water absorption	depending on the concrete quality	low	depending on the concrete quality

Installation

Installation complexity	low	low	very high
Formwork work	–	–	laborious/complex
Laying foundation	only possible with crane/excavator	1 person	2 persons
Installation time	fast	fast	time consuming
Transport costs	very high	low	low
Cable routing	integrated	integrated	on site

Installation

Variety of charging station models	type-related	flexibly applicable	type-related
Mounting options	threaded sleeves, tie rods, concrete screws, dowels	threaded sleeves, tie rods, concrete screws, dowels	concrete screws, dowels, tie rods

Universal charging station foundation

for the installation of charging columns and charging pedestals

ULF

Universal foundation solution for the installation of charging columns and charging pedestals.

Fastening option on the polymer concrete slab.

Connection of power and data cables via an empty pipe connection.

Advantages

- Universal foundation system for the installation of charging columns and charging pedestals
- Adaptation possibility of empty pipes
- Replacement or exchange of the charging station possible without removing the foundation

Scope of delivery

- 1 piece of ULF with blind plate

Dimensions

- total length: 755 mm
- foundation slab: ULF300: 300 x 300 mm, ULF380: 380 x 380 mm, ULF470: 470 x 470 mm
- height foundation slab: 80 mm
- foundation slab opening: ULF300/ULF380: 110 mm, ULF470: 150 mm

- foundation pipe (Øi): ULF300: DN200, ULF380: DN250, ULF470: DN300

Properties

- weight: ULF300: 16 kg, ULF380: 25 kg, ULF470 1x110: 39 kg, ULF470 1x150: 36 kg

Material

- polymer concrete slab: polymer concrete
- foundation pipe: PVC

The universal charging column foundation is compatible with the charging columns and wallbox pedestals of various manufacturers.

Find the solution that suits you on our website!

Electromobility in the private sphere

With our solutions you can also create a basis for e-mobility in your private space.

The complete ETGAR system is suitable for distributing electricity easily and reliably across the entire property. The electricity is routed out of the building via the building services outlet to precisely where it is needed using an empty conduit system.

The Universal charging station foundation ULF serves as a ready-to-connect foundation system with which the empty conduits are connected.

Single building services outlet for connecting an electronic device.
