Environmental Protection and Occupational Health and Safety at Hauff-Technik (HSE Health Safety Environment)

Dear Ladies and Gentlemen,

the health and safety of our employees is extremely important to Hauff-Technik. Both topics are part of our integrated management system. Furthermore, we provide our employees suggestions for steady improvement of workplace ergonomics, access to professional health care and sports activities.

A safe work environment is a top priority for Hauff-Technik. Therefore, Hauff-Technik commits herself to meet all legal requirements regarding occupational health and safety. An external Safety Engineer provides us with independent expert advice. All manual operations, machinery and the use of chemicals are revised on a regular basis by our supervisors which are being assisted by our Safety Engineer.

Trainings are given systematically and so all employees get to know just all they need to perform safely. A committee including the managing board meets every three months to discuss occupational health topics.

Immer. Sicher. Dicht.

Hauff-Technik is certified according to DIN EN ISO 14001. We collect information on environmentally relevant aspects of the company, we create data and figures and have the information then reviewed by a group of managers. Relevant topics can so be identified early and measures can be taken to improve our environmental performance.

To constantly improve the efficient use of resources and occupational safety is the central key of our Environmental management system. To achieve this, we set goals and follow up to reach them.

We use energy thoroughly and therefore we conduct an energy audit trial according to DIN EN 16247-1 regularly.

Best regards,

HAUFF-TECHNIK
